
Advantages-and-disadvantages-of-contingency-theory

Download

ADVANTAGES

1. **Greater pool of knowledge.** A group can bring much more information and experience to bear on a decision or problem than can an individual acting alone.
2. **Different perspectives.** Individuals with varied experience and interests help the group see decision situations and problems from different angles.
3. **Greater comprehension.** Those who personally experience the give-and-take of group discussion about alternative courses of action tend to understand the rationale behind the final decision.
4. **Increased acceptance.** Those who play an active role in group decision making and problem solving tend to view the outcome as "ours" rather than "theirs."
5. **Training ground.** Less experienced participants in group action learn how to cope with group dynamics by actually being involved.

DISADVANTAGES

1. **Social pressure.** Unwillingness to "rock the boat" and pressure to conform may combine to stifle the creativity of individual contributors.
2. **Domination by a vocal few.** Sometimes the quality of group action is reduced when the group gives in to those who talk the loudest and longest.
3. **Logrolling.** Political wheeling and dealing can displace sound thinking when an individual's pet project or vested interest is at stake.
4. **Goal displacement.** Sometimes secondary considerations such as winning an argument, making a point, or getting back at a rival displace the primary task of making a sound decision or solving a problem.
5. **"Groupthink."** Sometimes cohesive "in groups" let the desire for unanimity override sound judgment when generating and evaluating alternative courses of action. (Groupthink is discussed in Chapter 13.)
