## Winmax Polar H4 Flash File MT6580 8.1 Frp Dead Fix | Firmware |

And Fix this problem Before You Fix Your Own Frp This post was carefully reviewed and tested by a lot of people so you don't have to go through any trouble. It's recommended that you do a factory reset or setup the device using the Recovery partition as it's pretty easy to solve the frp after flashing. Right now the firmware is completely dead after flashing but there's a way to fix it. The crash, glitch, stuck and even dead frp problem can be caused by anything in the device including the software but if you're stuck after the flashing process. The first thing we want to do is a factory reset and a restore which can be done in the recovery partition. If the device is set to lock at the time of the factory reset then the data will be lost so backup your data before doing the factory reset. Step 1: Download and Install TWRP From Here: [Download and Install TWRP from Here](#): Step 2: Now it's time to flash the new firmware. The installation will start automatically and be completed automatically. Step 3: When the installation is finished, tap on the Reboot system option. Step 4: When the device reboots, it will show a blank screen. It's normal for the phone to reboot the first time after flashing the firmware. Your device will start to start the new boot animation after a while. Step 5: Follow the onscreen instructions to complete the reboot. Step 6: The smartphone will return to the home screen as the firmware is completely installed. You will see the new boot animation. Follow the onscreen instructions to confirm your settings and application. You will see an option named Reboot to bootloader. If you want to boot the phone directly into the recovery then select this option. Step 7: Now a TWRP recovery screen will appear. Tap on Reboot system option. Step 8: The device will be rebooted and the TWRP recovery will be boot. Step 9: Now enter the TWRP recovery. Tap on install option. Tap on the arrow next to it to install the file. Step 10: After the installation is finished. Tap on Reboot System to exit the recovery. The device will return to the home screen. You can now move on to the next step to get the device working as normal. Step 11: Now the device will start running and you can use it as usual. You can now proceed to the next step to fix the issue. Follow the steps below and you're good to go. Issue: After Inst
