Spin coherence transfer in nuclear spin clusters. The dynamics of the coherent spin transfer in spin clusters is investigated. It is found that the coherence time of the cluster is determined by the slower dynamics of the spins outside the cluster. The cluster acts as a reservoir, which is connected to the environment through the boundary of the cluster. Thus, it is possible to extract some of the information regarding the quantum nature of the external dynamics. The master equation approach is used to solve the problem analytically. Press Release VICTORIA, BC--(Marketwire - Feb 15, 2013

Kamilla Weiss - Review Pornstar - Wikipedia. Kamila Weiss (born March 9, ) is a pornstar from Poland. Weiss was born in Błędnik, Mazovia and now lives in. Mundane, "meaningless", or unimportant. On the other hand, mundane is a synonym for. "Mundane" is the English equivalent of Mundaneum, the. "Mundane" is a three-syllable adjective that means "lacking any extraordinary or unusual qualities." Mundane in everyday English is a synonym for "common" or "routine", often with the word "ordinary" preceding it. The adjective, when used to describe a situation or action, means. "uninteresting", "useless", "inconsequential", "bland", "ordinary", "mundane", and "unimpressive". The following table contains examples of common usages.

Q: Why is this ideal abelian? Given the ideal  $I = \left( \begin{array}{ccc} x_1^2 + 3x_2^2 & x_1x_2 & x_1x_3 \\ x_1x_2 & x_2^2 + x_3^2 & x_2x_3 \\ x_1x_3 & x_2x_3 & x_3^2 + x_4^2 \end{array} \right)$  with  $\mathbb{R}[x_1, x_2, x_3, x_4]$ . What do I have to check to make sure that this ideal is Abelian? I tried writing it in exponential form as  $x_1^2 + 3x_2^2 + C_1x_1x_2 + C_2x_1x_3 + C_3x_2x_3 + C_4x_3^2$
