Ps1 Passanun by FreeFontspslpassanun Welcome to Freefontspslpassanun.com - the most popular online font generator. We have free font samples available for download. Choose from a big library of font samples (TrueType,CFF,OpenType and PostScript fonts) and download a font in EPS, SVG and TTF or passanun in PDF, SVG or TTF format to your editor directly. Professional typography software will allow you to work with the font quickly. The samples below are a huge selection of font fonts available to download absolutely free. If you find any of the fonts you are looking for, make sure to purchase them. 1. Field of the Invention The invention concerns a milling roller assembly which includes a hollow shaft, a centering ring which is mounted concentrically about the shaft, a plurality of rolling bodies which are mounted in the shaft and which are fastened to the centering ring by way of fastening sleeves, and a drive element for the rolling bodies which is mounted in the shaft and which drives the rolling bodies in rotational movement about the shaft. 2. Discussion of the Prior Art In a known milling roller assembly of this type (European Patent Disclosure EP 0 297 830 A1), the fastening of the rolling bodies onto the centering ring is achieved by way of bolts which pass through bolt holes in the centering ring and into which, after assembly, the free end of the bolt is turned. These bolts are designed as expansion bolts and have an external thread and, as a result, require a correspondingly large amount of assembly space. Furthermore, the centering ring must be designed with a sufficient number of bolt holes for this purpose. Accordingly, it is an object of the invention to improve a milling roller assembly of the initially mentioned type in such a way that the rolling bodies can be fastened to the centering ring without involving a large amount of assembly space and, consequently, without requiring a large amount of assembly expenditure. According to the invention, this object is achieved by the features of claim 1. Advantageous further developments of the invention are specified in the subclaims. The centering ring is preferably a tubular centering member which is designed as a folded metal sheet and which is formed in a plane annular ring with a folded bottom edge, i.e. a plane annular ring which is open toward the interior of the milling roller 3ef4e8ef8d
