I have a dataframe and I want to list all indexes of all columns. For example df = pd.DataFrame({'a':[1,2,3], 'b':[4,5,6], 'c':[7,8,9], 'd':[1,2,3]}) I want something like this col\_list = ['a','b','c','d'] index\_list = [0,1,2,3] I found a function that will do this but it seems it's not compatible with the latest version of pandas (0.13). cols = df.columns.values indexes = df.index.values def get\_col\_idx(df): col\_idx = [None]\*len(df.columns) for i, col in enumerate(cols): if df[col].isnull(): continue else: col\_idx[i] = col return col\_idx The function is: get\_col\_idx(df) How can I get this list now? A: You can use get\_dummies and then convert to np.array. arr
