It is similar to conventional X-ray CT or magnetic resonance imaging (MRI), but uses short-lived radioactive tracers instead of radioactive material that emits X-rays. The tracers accumulate in certain organs and tissues. When the tracers decay, they emit annihilation particles that are detected by the PET scanner. The scanner identifies the areas of greatest concentration of the isotopes and displays them as pictures.Q: Windows service: Permission denied when running as System user I have a windows service that needs to call an MSSQL stored procedure using another system user, the service is running as SYSTEM user. Calling that stored procedure using the MSSQL Management Studio works fine, but if I call it using my service, it fails with this error: Cannot open the database "DBNAME" requested by the login.
