Bookmark Base is a simple-to-use tool that lets you import and manage bookmarks from web browsers, such as Internet Explorer, Opera, Firefox and SeaMonkey, conveniently gathering all data into one place. The application comes packed with a regular installer but it also offers a portable method, by setting it up on a USB flash drive. This way, you can run Bookmark Base on any workstation without prior installers, and not worry about new entries being added to the Windows Registry, Start menu or any other part of the HDD. The interface is represented by a regular window with a well-defined layout, where you can get started by selecting the bookmark sources to import. Optionally, you can merge the bookmarks with the current base. You can organize bookmarks into folders with descriptions, delete an entry from the list, as well as export bookmarks to a platform. In addition, you can use a search function when dealing with large amounts of data, establish the bookmark sources for each supported web browser, as well as edit proxy parameters if necessary. Bookmark Base has a good response time and a minimal impact on the system performance, since it runs on a low amount of CPU and RAM. No error dialogs have been shown throughout our evaluation, and the utility did not hang or crash. Unfortunately, Bookmark Base has not been updated for a very long time, and it does not work properly on newer OS platforms. I have decided to leave a short review about this software, because I was impressed with the level of customer support provided. I have been using this for a few days now and I am really happy with the final results, and I believe that the price
