A distinguishing feature of AutoCAD is the ease of customization, which allows users to create their own designs. This results in a vast library of pre-created layouts, which can be imported and used in new drawings. AutoCAD is used by architects, engineers, drafters, and many other users. Development AutoCAD AutoCAD can be used for many commercial purposes including building architectural and engineering designs, producing schematics and drawings, and drafting bills of materials. It has many business and industry specific features. Other products include AutoCAD Map 3D, VectorWorks, AutoCAD LT, and AutoCAD Architecture. AutoCAD LT (formerly known as AutoCAD R14), is a lower-cost alternative to AutoCAD, released in 2009. History AutoCAD was originally named as "AutoDraw." It was created in 1981 by Edwin Artman, a freelance developer working from a kitchen table in Marin County, California. His first customer was Barney Boissonnault, an architect. Boissonnault paid Artman \$75 for a bare-bones version of AutoDraw and the knowledge to set up and run it on an Apple II computer. In 1982, Artman created a more complete version of the software, AutoCAD, for the Apple II, which he sold in 1982. In 1983, AutoCAD was acquired by a small company named Mattel, which then sold it to Autodesk in 1985. In 1983, Mattel modified AutoCAD to work on IBM PC's and released it in 1984. In 1985, Autodesk released the first version of AutoCAD for the Microsoft Windows platform. In 2005, Autodesk acquired a company named ESI, which had developed a new version of AutoCAD. This new version, AutoCAD LT, offered the same product for a lower cost. AutoCAD LT is no longer developed or sold by Autodesk, but is available as a freeware. Features AutoCAD has many standard features and many others that are available to the user. Standard features include: Generation of two-dimensional and three-dimensional drawings. Creation of 2D drawings of fixed or variable data, such as title, dimensioned, viewport, and page break elements. Measurements, functions, and levels. Cre

As a conventional automobile steering apparatus, there is one which is disclosed in Japanese Patent Unexamined Publication No. Sho. 57-164852. In this conventional automobile steering apparatus, a worm gear is rotatably connected with a steering shaft, a worm wheel is fixedly provided to the worm gear, a rack bar is rotatably provided to the worm wheel, a ball nut is rotatably supported on a ball bearing shaft which is fixed to the steering shaft, and a pinion gear is rotatably supported on the ball bearing shaft so as to be able to mesh with the worm wheel. In this conventional automobile steering apparatus, in order to reduce backlash, the ball bearing shaft is twisted in two directions so as to incline an axis of the ball bearing shaft with respect to a steering shaft axis direction. Since this conventional automobile steering apparatus requires the ball bearing shaft to be twisted in two directions, it is necessary to use a ball bearing having two balls. Moreover, since the ball bearing shaft is twisted in two directions, a large axial load is exerted on the ball bearing. As a result, in a case of a dual ball bearing, the load of one of the ball bearings is increased and a friction between the balls becomes large, so that a lifespan of the ball bearing is reduced. Furthermore, the structure of the ball bearing is complicated, and a manufacturing cost thereof is increased.

Characterization of noroviruses in patients with acute gastroenteritis in Turkey. Although noroviruses are the leading cause of acute gastroenteritis, the incidence, prevalence and serotypes of noroviruses are still poorly understood. The present study was conducted to determine the prevalence, the genotypes and the prevalence of GII.4 genotype in Turkish children with acute gastroenteritis. A total of 1076 stool specimens were collected from children with acute gastroenteritis between January and June 2009. The stools were analysed for the presence of norovirus, rotavirus and enteric adenovirus. The RNA of these viruses was extracted from the stools and the detection and genotyping was performed by reverse-transcription polymerase chain reaction and direct sequencing. The
