The batswoman will be out of action for at least six weeks, ruling her out of the new season of the County Championship. The 24-year-old had surgery on the right ankle injury three weeks ago. England Women have not lost a game in World Cup competitions since the 2015 final, where they beat New Zealand by 56 runs at Edgbaston. The side have now gone 12 matches without defeat and sit top of the group with four points. A knee injury kept MacLennan out of the first two World Cups, but she took part in the 2015 tournament and featured in the 2017 T20 World Cup. New Zealand, who were the last team to defeat England in a World Cup, went down to a six-wicket defeat in the group stages. But the New Zealand Cricket board has made the decision to leave MacLennan out of the national side after she sustained another stress fracture in that match. England Women are due to play a two-match one-day series against Pakistan A in the United Arab Emirates this week, before the Women's Twenty20 World Cup begins in Bristol on 6 April. "Moira MacLennan has been assessed by England Women's medical staff and it has been decided that she will not be available for the new season of the County Championship," said a statement on the England and Wales Cricket Board's website. "Moira MacLennan is a wonderful cricketer and an integral part of the England Women's squad. She has done a great job at the World Cup and we wish her a speedy recovery 1d6a3396d6

Restarting PC and starting Itunes manually also give same issue. Please help. On first startup, laptop hard drive is failing. The system will not boot (nothing shows on the screen). When I try to boot from an external hard drive or usb flash drive, Windows does not start. I have already tried the following: 1. Disconnect all hard drives except the boot drive. 2. Unplug all USB devices except the external hard drive. 3. Unplug the power cord and wait 20 seconds. Plug the power cord back in and wait 20 seconds. 4. Turn off and wait 30 seconds. Plug in the power cord and turn on the system. The only thing that has worked so far is booting up from a live CD (but I need a bootable DVD so this is not an option). I am concerned that Windows is damaged as the error messages are consistent. If so, what should I do to repair it? Question owner Sorry for the late reply! I don't think it is a BIOS issue. It is related to the hard drive. When you were booting from a live CD, you mentioned about the fact that you need a DVD to boot. Is the bootable DVD is for repairing Windows? Thanks a lot for the answer. Could you please explain how to use the troubleshooting tool for this issue. I am currently unable to boot my laptop
