Active4D is a toolkit aimed at those seeking to improve performance when creating web resources that are 4D. The script engine is fully compatible with the programming language and veterans of the trade will quickly recognize most features available in 4D. All types of data are supported, except for 2D arrays. However, the program adds over 300 new commands to the many already available in the scripting language. The same syntax is used and a number of familiar features make the syntax even easier to work with, including automatic highlighting and tag coloring. The tool can be employed in database environments, with built-in commands to produce scripts targeting a particular database object, as well as various kinds of selections. The program ships with a comprehensive manual of over 600 pages, guaranteed to solve most issues that might appear when using this comprehensive development environment. Most sections also feature informative examples and many images depict and explain complex situations in an intuitive manner. What's New In Active4D?

Active4D is a software application based on Java, with a graphical interface and an active-scripting-like programming language. It is intended to improve performance when working with 4D by making use of advanced functions and keywords. The toolkit provides support for the 4D data format, has all types of data supported and has features specially designed for creating and maintaining web resources. The scripting engine is fully compatible with the programming language and veterans of the trade will quickly recognize most commands. All types of data are supported, except for 2D arrays. However, over 170 old commands are supported, to which the application adds over 300 new ones. The same code syntax is used, complete with highlighting options. The program also features support for regular expressions. The tool can be employed in database environments, as multiple commands are hardcoded for improved results. For example, one can query an entire array of objects, as well as certain selections. Active4D shows improved results when generating scripts targeting the relation between a database and its corresponding web page. It is well-adapted to working with data from multiple sessions and can collect such information from external forms. All transfer protocols can be adequately handled with the program and JSON data for use with JavaScript libraries can be generated. The program ships with a comprehensive manual of over 600 pages, guaranteed to solve most issues that might appear when using this comprehensive development environment. Most sections also feature informative examples and many images depict and explain complex situations in an intuitive manner.
