The Project Reportcard was designed to be a tool to help Project Managers assess their projects based on organizational standards implemented by their PMO. Understanding what the organizational KPIs are

Use the Project ReportCard Product Key to view information on your project in relation to your organization's published and agreed upon KPIs. Project ReportCard Crack Mac allows you to view a) performance against an expected PDR, b) performance against a published and agreed upon PDR and c) performance against the optimal PDR for your organization. Project ReportCard provides charts and graphs that summarize the health of your project based on the Standard Objectives. If your organization has more than one project, use Project ReportCard to select the project for which you want to view the PDR and the associated objective. Project ReportCard allows you to view performance against a published PDR and an expected PDR. If a PDR is not published for your project, Project ReportCard will assign a published and agreed upon PDR to the project based on organizational standards. If a PDR is published for your project, but is not the expected PDR, the project manager has the option to see the PDR and objective and to apply the proper corrective actions. Project ReportCard allows you to evaluate your project performance against your organization's published and agreed upon PDR. This includes accounting for: exceptions, decision criteria, accepted defect counts and work remaining, which are all calculated based on an agreed upon expected PDR. Performance against a PDR of an expected value is calculated from the point when the project is initiated to the end of the project. Project ReportCard allows you to view your project performance based on the Project Standard Objectives. Performance against Standard Objectives is calculated based on an agreed upon published and agreed upon PDR. Performance against a PDR is calculated from the point when the project is initiated to the end of the project. Performance against a Standard Objective is based on an expected PDR. Performance against an expected objective is calculated from the point when the project is initiated to the end of the project. Project ReportCard includes information about: •A summary of performance against the published and agreed upon expected and optimal PDR •A summary of performance against the published and agreed upon PDR •A summary of performance against the published and agreed upon expected objective •A summary of performance against the published and agreed upon optimal objective •A summary of performance against the published and agreed upon quality objectives •A summary of performance against the published and agreed upon value-added objectives •A summary of performance against the published and agreed upon cost objectives •A summary of performance against the published and agreed upon configuration •Performance against a Standard Objective 6a5afdab4c

The Project ReportCard is a software tool that will show the Project, Resource and Organization details of your project on a single interface. It compiles the Project Requirement KPI results and Organizational and Resource KPI results from multiple sources to a single interface and provides a central repository for them. Project ReportCard creates a printable summary of your Project and its status, once a Project ReportCard update is submitted to Project Server. The Summary includes various project information and status information. The Project ReportCard attempts to provide a summary with the highest quality, readability and clarity of information. The Project ReportCard is presented as a grid structure, divided into columns and rows. Each column indicates the Project, Resource and Organization information; each row indicates the KPI and Measure information. The Project ReportCard report is provided in multiple formats, including: Grid or Tabular format with a Drill Down capability Drill down or Tree view There are multiple views: Single line overview Multiple lines overview Single line drill down view Multiple line drill down view The Grid or Tabular view allows you to view any of the Project, Resource and Organization information in more details. For example, changing the name of the Project to your desired name will automatically update the Project KPI and Measure results for that Project. Any Resource or Organization property updated via the Print icon will display in all KPI views The Tabular view, after having selected multiple rows and columns of the project report, allows you to drill down and view the KPI and Measure results for individual resources and organizations. After the drill down, all KPI tables are connected with arrows, to show the relationship between the selected resources and project. The Grid or Tabular view allows you to view multiple lines of Project, Resource and Organization information in more details. For example, if you wish to see the Project and Organization information for each Resource, you can select the row and column of each Resource to view all the Project and Organization information related to that Resource The Single line and Multiple line views allow you to view the KPI and Measure results for a single Project, Resource and Organization. These Views are useful to confirm that all tables related to that Project, Resource or Organization are displaying KPI and Measure data. The Single line view allows you to view the Project, Resource and Organization information in more details. For example, if you wish to see all the Organizations associated to a Project, you can select the row of the Organization Name to view all the Projects and associated

What's New In Project ReportCard?

The Project ReportCard generates a listing of the deliverable project status, organizational standards and other pertinent information for every project.
