SyncToy (32 and 64 bits) is a handy tool that let you synchronize the content of two folders. With this application, you don't have to go through a series of activities to set up synchronization. You can easily create a task on both sides of the folder pair, and it's done in just a few clicks. The application takes little time to install and, after it's been deployed, you can go ahead and use it right away. The wizard takes you through a series of steps, starting with creating a task. You can then select a synchronization mode (copy, sync, or echo) and select to include or exclude files. A preview mode can be launched to mimic actual synchronization just to see whether it's properly configured. Description: Unbiased Content 5.0 (64 bits) is a small application that's designed to speed up your way of making presentations. When you're part of a team, it might be useful to have an automatic way of presenting results in a project or to the whole company. As far as we can tell, content is displayed without any copyright issues. During the installation process, a series of templates is available, though most of them only come with some files. The templates are available in presentations, images, and colors, but we're not sure whether they have to be updated. Usage of the program is straightforward, as the user interface has just one toolbar and a menu on the left, allowing you to set up presentations without having to make a lot of clicks. Description: The free Revit (64 bits) is a simple utility that can make the conversion of 2D to 3D much easier.
