O'Connell.Q: convert datetime string to only

timestamp in format "YYYY-MM-

DDTHH:MM:SS" How to convert a string to

"only timestamp in format YYYY-MM-

DDTHH:MM:SS"? The code I have is the

following: import pandas as pd import

datetime data =

["2018-03-01T00:00:00.000Z",

"2018-03-01T00:00:00.000Z",

"2018-03-01T00:00:00.000Z",

"2018-03-01T00:00:00.000Z",

"2018-03-01T00:00:00.000Z"] df =

pd.DataFrame(data, columns=['datetime'])

---

```
df["datetime"] =
pd.to_datetime(df["datetime"])
print(df.dtypes) print(df["datetime"].strftime(
"%Y-%m-%dT%H:%M:%S.%fZ")) but this
returns: datetime64[ns]
```

```
2018-03-01T00:00:00.000+00:00
2018-03-01T00:00:00.000+00:00
2018-03-01T00:00:00.000+00:00
2018-03-01T00:00:00.000+00:00
```

2018-03-01T00:00:00.000+00:00 However, I only want 2018-03-01T00:00:00.000Z in this result. A: You could have first converted the datetime to a string and then removed the extra. from the resulting string. import pandas as pd import datetime data = ["2018-03-01T00:00:00.000Z", "2018-03-01T00:00:00.000Z f30f4ceada
