
was one of the unfortunate victims of the catastrophic myth-making of the 2016.

when I do: `getAppVersion()` -> returns last java app version used (as string) I got this R 10.0.1 (Java 1.7.0-SNAPSHOT) it says that jre 1.7 is installed but I just need 1.7. A:

Take a look at the documentation of `AppVersion`

```
java.lang.reflect.Field.getAppVersion(): Returns the version string associated with this field, which may include the version of the running JVM. The return value is a String, you want to use the String API instead of the Raw String API. package org.zeus.schedule.vo; import org.zeus.scheduler.entity.ZeusJob; import org.zeus.scheduler.entity.ZeusJobGroup; import org.zeus.schedule.vo.JobStatus; import java.util.List; public class JobStatusVO implements JobStatus { private long id; private String name; private JobStatusType type; private Integer created; private String message; private Integer startTime; private Integer finishedTime; private List tags; public JobStatusVO() { } public JobStatusVO(long id, String name, JobStatusType type, Integer startTime, Integer finishedTime, List tags) { this.id = id; this.name = name; this.type = type; this.startTime = startTime; this.finishedTime = finishedTime; this.tags = tags; } public long getId() { return id; } public void setId(long id) { this.id = id; }
```

Nas Profundezas Do Mar Sem Fim (1999) - Legendado Hijos R10rc1 KinofaiQ: How can I connect to external hard disk over the network? I have a Windows 7 PC with 2 hard disks connected to it. On one of the disks, I have Windows 7 (installed on it at the time) and on the other, I have a Linux Mint 17.1 (Arch based). I have some files that I need to transfer and edit (over SSH and SFTP) from one disk to the other. The issue is that if I set up the hard disks like that, the external disk is not visible to the Windows PC, which is what I need to do. I need to add that I'm extremely new to both Linux and Windows, but the final scenario is that I will need to transfer data from a Windows PC to a Linux PC. As a temporary solution, I will just need to connect to the external disk as if it were another local disk. A: If you would like to access the external disk from the Linux PC, you would need to have the first disk's partition mounted on the Linux system. You could probably do this by adding the disk to fstab, but it's very likely that your external disk will change the name of its primary partition, so you might actually need to add an entry to fstab for the disk every time you turn the external disk on. You could also use a free program that mounts partitions on USB disks on your Linux system.

1. Field of the Invention This invention is related to circuit breakers and, more particularly, to circuit breakers that are able to detect fault currents of a specified value and produce a clear signal to thereby indicate a presence of a fault in a power distribution system.
2. Description of the Related Art A circuit breaker is used to provide electrical protection to electrical circuits. A circuit breaker may be used to protect an electrical circuit from damage caused by a trip a fault condition, such as an overload condition, a ground condition, or a short circuit condition. An instantaneous or time-current-dependent circuit breaker operates by separating the electrical contacts of the circuit breaker within a fraction of a second to provide protection to the circuit. A fault condition that can occur in a circuit breaker is a short circuit condition. A short circuit condition can damage the circuit breaker itself, other components in the system, and/or other equipment 1cb139a0ed
