As early as 1980, there were many individuals and small companies using computer-assisted design (CAD) software. It was called "CAIDE" (Computer-aided Inventor's Assistant for the designer) and was a word processor-type program that used a single C compiler to run on the Apple II, CFA, CGA and IBM PC, including those made by DEC. AutoCAD 2007 was first released in December of 2005, and was the first version of AutoCAD available as a stand-alone license, rather than a license that includes the components. The free AutoCAD version, which was known as AutoCAD Lite, has been around since 2000 and has been rewritten multiple times. AutoCAD is available as a full suite and a short-term subscription for students and schools. About AutoCAD AutoCAD is a commercial computer-aided design (CAD) software. Originally known as AutoCAD LT, AutoCAD is a desktop app running on microcomputers with internal graphics controllers, a Windows operating system, a drawing file format (DWG), and a programming language known as Autodesk's "Académie". Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. In January 1983, AutoCAD 1.0 was released to the public. In 1988, AutoCAD was first available in Windows 3.0, and the programming language "Académie" was available on the Macintosh version of AutoCAD. The programming language has since become known as "AutoLISP", or the ACAD file format is known as "DWG" (Drafting and Visualization). Since the release of AutoCAD in 1981, over 130 million copies of AutoCAD have been sold.

With the turmoil in Ferguson, the death of Michael Brown and the public protests that followed, businesses have been feeling the pain from divided America. It didn't help that January 2014 was one of the coldest months on record. That didn't seem to make any difference to the turkeys, though. Consumers are still buying at an annual rate of $4.2 billion, a 6 percent increase from 2012. So, if you're looking for an unexpected thrill, check out the turkeys. They could be more popular than Black Friday. "With so many shoppers looking for deals and many stores remaining open Thanksgiving night, we expected more shopping activity, but it wasn't enough to meet our expectations for the season," said Kevin Hassett, director of economic policy studies at the American Enterprise Institute. So, the holiday season is as good as dead. The only question left is what to do with all the turkeys? Turkeys usually make for terrible eating. For a turkey meal, you'd need two pounds of turkey, 5 pounds of stuffing, 4 cups of gravy and more than 4 gallons of milk to make it nourishing. But if you sell them at a loss, they become a valuable business asset.
