KEYMACRO is a free and easy to use program for generating keyboard macros for use with Windows applications.

KEYMACRO was created as an alternative to Microsoft's Visual Basic 6 as it is a much more powerful and feature rich program with an even more intuitive user interface. Its easy to use wizard-

style interface makes it simple to create keyboard macros and the drag and drop mechanism allows the macros to be easily edited and deleted. There are many features not found in other programs that let you generate your own custom keyboard macros quickly and easily, they include: * Key sequence editor * Single key press (if you hold down the CTRL key while pressing a key, this will cause that key to be pressed several times, this is very useful for programs with hotkeys) * Custom patterns (any character can be used) * Custom file types (input, output, input/output) * Formats for 'special characters' (such as "`1234567890A..Za...") *

Characters that can be repeated (e.g. Shift + X) * Auto-repeatable macros (such as Shift + Double Click) * Macro icons (that make them more usable, such as a clipboard icon) * One-key toolbars (such as a "Finish" toolbar) * Custom icons (useful for programs that use custom icons) * Macro export (including to files in.keymac) * Macro editing (including renaming and moving) * Macro previewing (including moving a macro to another location) * Keyboard preferences * User preferences (such as the hot keys that you use most) * Display preferences (such as whether you want your keyboard to appear as a physical keyboard or a QWERTY keyboard) * Hotkey editing (including whether you want hotkeys to work for the entire window or just the active window) * Hotkey popup (if you set this to 'automatic' then every time you press a hotkey, a popup will appear) * User message box

(this allows you to display messages to the user and is disabled by default) * Auto-shutdown (allows you to create a keyboard macro that will shut down your computer) * Hand-off (allows you to add a keyboard shortcut that will launch another program) * User folder (for keyboard macros stored in the user's.KEYMACRO folder) * User preference (allows you to set certain program-specific preferences) 1d6a3396d6
