Autodesk currently offers three editions of AutoCAD: AutoCAD LT, AutoCAD Standard, and AutoCAD Enterprise. AutoCAD LT is designed for production and is suited for use in small to medium-sized businesses, while AutoCAD Enterprise is designed for larger and more sophisticated organizations. Both editions are priced based on monthly use and the level of support. AutoCAD LT is a free, open-source application, though the majority of the features in AutoCAD are only available in the commercial software. Some features in AutoCAD Enterprise, such as full access to the Autodesk App Gallery, are available in AutoCAD LT as well, although not all of them are fully functional, such as the ability to save and transfer drawings to a standalone drawing file format that can be opened in any Windows compatible application. AutoCAD is available as a single-user desktop app, an interactive online portal application, and as a cloud-based service. Although the desktop version is the most common, the online portal and cloud-based versions are also available. A comprehensive instruction manual is provided with AutoCAD. In addition to the product manual, a user manual is provided with AutoCAD LT and a user guide is available to learn how to operate the software. In many industrial applications, it is necessary to produce a large volume of sheet metal tubing in a continuous operation with minimal costs of raw material, energy, and time. One such application is the production of sheet metal tubing by blanking or by rolling in a continuous casting machine from a billet of metal. Blanking is a process by which metal is rolled from a billet into sheet metal of a given width and thickness. To provide a continuous operation in an uninterrupted process of metallurgical formation from the billet to the final sheet metal product, it is generally necessary to provide a continuous stream of molten metal that is readily handled. This stream of molten metal, referred to as a "dip stream", is formed by the molten metal disposed between the casting and rolling mills of a continuous casting machine. The dip stream must be kept at the proper temperature, preferably in the range of about 1400.degree. F. to 1900.degree. F., for the molten metal to remain at a desired level in the continuous casting machine between the casting and rolling stations. A conventional continuous casting machine, such as shown in FIG. 1, typically includes a casting machine in which a b

Record keeping Users can save documents and drawings in a variety of record keeping formats. The most common ones are: The Autodesk DWG format, which is created by Adobe Systems. The most common format for professional architectural, engineering, and construction (AEC) drawings. PDF is the primary file format for graphic and print files on Windows platforms. The AI format (formerly OpenDraw format) is a native format for AutoCAD. AI files can be viewed in the 3D view of AutoCAD (AutoCAD LT) or in AutoCAD software such as Civil 3D. However, it is not possible to edit an AI file in AutoCAD LT or Civil 3D and save the changes back to the AI file. The DXF format is a native format for AutoCAD, and is included in the AutoCAD LT and AutoCAD applications. The DWG format is associated with the Autodesk DGN file format, and also supports the PDF and EPS (PostScript) formats. AutoCAD MEP integration AutoCAD MEP is integrated with Microsoft Building Design (Microsoft: BIM 360 - A360) offering a workflow that integrates the BIM 360 applications with AutoCAD MEP. Using BIM 360, a design team can create an AutoCAD model for an existing architectural design (Architectural design) or an MEP design (MEP design). The model can then be taken into the BIM 360 applications or sent to a workstation to be processed with BIM 360 applications. BIM 360 has a variety of tools for visualizing the models in an efficient and accurate manner. Connect to your account using the Autocad. NOTE: If you have an Autocad subscription version that is not at version 2020, you must use version 2017. Open Autocad and create a new drawing and choose to be a template. If you are working with a drawing that is already opened, then choose "Create new document". Choose the "Edit the model" feature in the "File" menu. In the "File" menu, choose "Add model". Choose the "Create a model" option. Click "OK". Click the top icon for the viewport. Click "Import". Browse to the AutoCAD version 20.15 file that you downloaded. Select "Import Template". Click "OK". The file opens in the viewport. Click the "Object" tab on the ribbon. Choose "Group" in the "Align" drop-down list. In the "Controls" area, select "Move To" in the "Navigation" drop-down list. Drag the viewport window. Click the arrow to the right of "Move To". Choose "Geometric". Click the "Draw" button. Choose the "AutoCAD" command from the "Draw" drop-down list. Drag the viewport window. You will see the "Direction" dialog box. You can use "Move To" to change the view to show the CAD frame and "Scale" to change the size of the CAD frame. Select "Navigate". The Autocad frame changes to match the CAD frame. If the view is too large, you can use "Scale" to reduce the size of the CAD frame. You can then change the "Width" and "Height" settings. Select "Direction". You can use "Rotate" to change the orientation of the CAD frame to the left or right. Select "Reset". You can use "Direction" to change the orientation of the CAD frame. Select "Navigate". Select "Geometric". The "AutoCAD" window is aligned with the viewport. You can use "Move To" to change the view to show the CAD frame. Click the "Edit" button. Click the "Components" tab. Select "Text" in the "Line" drop-down list. Click "Add".
