Network Inventory Monitor Crack Free Registration Code

Network Inventory Monitor (NIM) is a network inventory monitoring program and profiler. NIM runs on Windows 98, ME, NT, 2000, XP, 2003 and Vista. You can use Network Inventory Monitor to create a network inventory from remote computers or LAN area and monitor your network inventory to find problems and

dependencies. Network Inventory Monitor works fast and has the ability to send messages and screendumps to computers on remote places. Network Inventory Monitor uses LAN Explorer standard (NIM Explorer) to search remote computers and shows a simple and comfortable user interface. You can easily select and describe hosts to monitor and generate inventory about them. You can generate reports about hardware, installed software, running processes, shared resources, service packs and hotfixes of remote computers. You can generate report about host with any fields, any filter and any order of fields. With "Network Inventory Monitor -

Administrator" you can quickly and easily generate and publish reports about network hosts. Network Inventory Monitor offers you also the possibility to create Network Inventory from remote computers using LAN Explorer functionality. You can connect to remote computers with Network Inventory Monitor (NIM) and generate a network inventory. You can copy the inventory from remote computers to remote computers with NIM Explorer functionality, send messages and images to remote computers. You can also scan remote computers for viruses and also scan network inventory for viruses using scanners from Kaspersky, Symantec and McAffee. Network

Inventory Monitor will let you create a network inventory. By monitoring the inventory you can get quick and complete information about operational systems, service packs, hotfixes, hardware, installed software and running processes on remote PCs. You can get screen shots from remote computer and send message to remote PC. Also you can create reports about hardware, installed software and running processes on computers in your local network. Our inventory software program will collect the following information about the user workstation in your network: - Operational system type, version and build; - Installed service pack and hotfixes; - Host name,

description, user name and operational system product ID; - Internet Explorer version; - Processor type and frequency from the vendors: Intel, AMD, VIA, Cyrix, Alpha, PowerPC, SiS, Transmeta, National Semiconductor, MIPS, Centaur, UMC, NexGen, WinChip and Rise Technology; - Motherboard, BIOS information, serial number and chassis; - Network adapter, IP-addresses and MAC-addresses; - 09e8f5149f

Network Inventory Monitor is a software used to collect info about remote computers in your local network. With our software you can easily get the information about all hosts on your network: ⁇ host names, description, user name and operating system name and version; ⁇ IP-addresses and MAC-addresses of each computer on your network; ⁇ software installed, services started, memory size, CD-ROM size, hard drive space, local printers and so on. Information about computers in your local network can be sent to administrators for

various purposes: ⯑ To keep track of deployed network services and install new updates and versions; ⯑ To monitor your network security policies; ⯑ To investigate suspicious activities. Also you can easily send message to remote computers from "Network Inventory Monitor - Administrator". There is no limit on the number of computers you can monitor. All Network Inventory Monitor users can create their own subnets, workstations and hosts inside them. And you can get a list of all the computers in each subnet with one click in "Network Inventory Monitor - Administrator". Network Inventory Monitor Key Features: ⯑ Network Inventory Monitor will collect information

about all computers: ⁇ Host names, description, user name and operating system name and version; ⁇ IP-addresses and MAC-addresses of each computer on your network; ⁇ software installed, services started, memory size, CD-ROM size, hard drive space, local printers and so on. ⁇ You can send messages to remote computers with click on "Send message" button. ⁇ Password protection: Network Inventory Monitor has a built in password protection with strong cryptographic algorithm. "Network Inventory Monitor - Administrator" can easily update "Network Inventory Monitor - User" by one click in the remote host's desktop. You can easily send message to remote computers from

"Network Inventory Monitor - Administrator". You can easily export all collected data to MS Excel, MS Word or XML formats. You can also export data to HTML, XML, MS Visio XML drawing or RTF formats. What's New in Network Inventory Monitor 6.6: ⍰ Added support for Windows XP SP2 OS ⍰ Now you can get and read ID numbers of HDDs and CD-ROM drives ⍰ Now you can choose what size of chunk to perform while reading hard drive ⍰ Now

What's New in the?

The Network Inventory Monitor Software will

collect all information about the user workstation in your network. The information collected will include: ▢ Operational system type, version and build; ▢ Installed service pack and hotfixes; ▢ Host name, description, user name and operational system product ID; ▢ Internet Explorer version; ▢ Processor type and frequency from the vendors: Intel, AMD, VIA, Cyrix, Alpha, PowerPC, SiS, Transmeta, National Semiconductor, MIPS, Centaur, UMC, NexGen, WinChip and Rise Technology; ▢ Motherboard, BIOS information, serial number and chassis; ▢ Network adapter, IP-addresses and MAC-addresses; ▢ Memory size and memory modules; ▢ Name and type of HDD,

CD-ROM, FDD, video card, monitor, modems, multimedia devices; ⬚ Total and free size of HDD volumes; ⬚ All printers; ⬚ Installed software on remote PCs; ⬚ Installed software quantity all over the network; ⬚ All running processes; ⬚ All shared resources; ⬚ All windows startup programs; ⬚ All reports created by "Network Inventory Monitor - Administrator" can be saved and export to MS SQL Server or HTML, XML, MS Excel, MS Visio XML Drawing or RTF formats. You can also use it to update "Network Inventory Monitor - Administrator" from "Network Inventory Monitor - User". You can save the data collected from computer, printer or

network devices using "Network Inventory Monitor - User". You can send messages from "Network Inventory Monitor - User" to "Network Inventory Monitor - Administrator". You can also hide all "Network Inventory Monitor - User" window and tray icon. Please notice that you can also hide the main "Network Inventory Monitor" window and all tray icons. In this case you will not see all reports, but you can still read all data in "Network Inventory Monitor - User". Some notes about "Network Inventory Monitor": ⍰ You can create a report or a list with the item "Operational system", "Service packs" and "Hardware". With this report you will have full information about your

computers, but you will not have screen shots or other data collected from remote PCs. To create this type of report you will need to export

System Requirements For Network Inventory Monitor:

Minimum: OS: Windows 7, Vista, XP (32-bit) Processor: Intel or AMD dual-core CPU with at least 1 GB RAM Memory: 1 GB RAM Graphics: DirectX 9 graphics card, with 512 MB of dedicated video memory DirectX: Version 9.0c Sound Card: DirectX 9 audio card Hard Drive: 500 MB available space Screen Resolution: 1024x768 or higher Additional Notes: HLSL Shaders are
