Download

So, the hope is that you can do it, because there's a huge list of things to be modified. For the lucky ones that have the right files, please, let me know, because I'm the one that doesn't want it to turn into an other directory with files that have to be separated and copied again. A quick note before you start to go reading: For the copying part, you can use the Windows 7 command-prompt (Run as Administrator). For other manipulations, you can use the.NET Framework and C#. I'm not really good in them, because I'm more interested in getting things done fast, so I don't really care about the details. There's no need to download a separate.NET Framework. If you're using Windows 7, it's already installed. If you're not using Windows 7, you can just download it from www.microsoft.com. I've tried these ways, but I still haven't been able to implement it. If this question helps you, please help by answering it. A: I've figured it out! First, what you have to do is to create the directory Age_of_Empires_3.exe. Then you have to copy the directory data from the game directory for the Ages of Empires 3 executable. Note: data/ for the mods is copy-pasted from Age of Empires 3. After that, you have to change the variable MODDIR to the Age_of_Empires_3.exe directory. If you want to see what's inside the data.bar file, try to copy and rename it to data.bar, edit it and see what it says. If you want to edit it, you'll have to know it's XML format, like most users do. And there's the easiest way to do it, if you're using Windows 7, the Resource Manager tool. Click here to visit the Resource Manager official website and to find further information. After you've done it, you're almost done. You've got to edit the Age of Empires 3.exe and Age_of_Empires_3.exe files, which are in the same directory. All the others files are already "unpacked" there, so you have to do nothing to them, except to open them. If you want to remove any of the units, make the changes, copy it and then remove
