All Video to Audio Converter is an application that allows you to extract the audio stream from video clips and encode it to various formats, such as MP3, WAV, AAC, WMA and AMR. It can be easily used by individuals of any experience level. The interface of the program is plain and simple to navigate through. Video clips can be imported into the list by using the file browser only, since the "drag and drop" method is not supported. Batch processing is not supported by the unregistered version. In the queue you can check out the name and size of each file. So, all you have to do is establish the output destination and file type, in order to proceed with the conversion task. But you can also change audio parameters when it comes to the codec, bit rate, sample frequency rate and channel mode. On top of that, you can preview clips in a small, built-in media player and change the interface language. The audio conversion software takes up a moderate amount of system resources, has a good response time, quickly finishes a task and manages to preserve a good sound quality in the output audio tracks. No errors have occurred during our testing and All Video to Audio Converter did not freeze or crash. There's also a well-written help file with snapshots that you can check out. We strongly recommend All Video to Audio Converter to all users.
