Advantages of Material Design First of all, let's be clear that Material Design is not a layout pattern per se. Material Design was introduced by Google to describe the visual language of Android and a starting point for building future products. Material Design uses flat design and relies heavily on the use of shadows, typefaces and colors. Material Design is a well thought out system. First and foremost, Google made sure to define what they wanted to achieve: Google should have a single visual language, just like the different web browsers. Google wanted to make Android's design system more powerful and expressive and achieved this through a few rules. Material Design achieves a common look and feel across various screens: mobile and tablet, small and large. But most importantly, Material Design is fun to use. The new stuff you see on Android makes your phone feel new again. It's great fun seeing your phone open with a new app, such as the Next Web app. I'm excited about the new Newsstand, Gboard, and the upcoming Stamps app. Material Design is flexible. It has the power to adapt to the screen size of different
