In the present study we assessed the effects of ovarian hormones on leptin's effects in obesity. Female mice were ovariectomized or sham operated. After 4 wk, mice were placed on a high-fat diet. After a further 4 wk, all mice received an i.p. injection of human recombinant leptin at a dose of 5 mg/kg. Three groups were studied: sham ovariectomy, ovariectomy, and ovariectomy followed by a single leptin injection. Body weight, food intake, fat pad weights, and plasma leptin were measured. Leptin reduced body weight gain and food intake and increased the fat pad weights of sham-ovariectomized mice. In ovariectomized mice, the effects of leptin on these variables were abolished. In this group of mice, the ovarian hormones were not enough to block the fat pad weight loss and the decrease in food intake. However, after leptin injection, the fat pad weights and food intake of ovariectomized mice were restored to levels comparable to those in sham-ovariectomized mice. In conclusion, estrogen plays a key role in the leptin-induced weight loss of mice.//

I'm trying to download a random.mp3 file from Dropbox's API. I have the script setting a range of files to get, and it successfully downloads the first file it should (as indicated by a successful exception in the code), but once I get the first file, my script falls apart and reports that "File size does not match its expected value". I'm not sure why this would happen, but here's the relevant code. from dropbox import DropboxClient import os from random import randint bucket_name = 'jiggler_pc' key_pattern = '*.mp3' client = DropboxClient(access_token="") dropbox = client.files.list_files(path=bucket_name, max_file_size=2048, key_pattern=key_pattern) for i in range(1,10): random_file_name = f'{i}{randint(0,4).zfill(4)}_{''.join(random.sample(p.title for p in dropbox, random.randint(1,10)))}.mp3' print(random_file_name) with open(random_file_name, "rb") as rf: client.files.download_file(filename=4bc0debe42
