Image with no alt text. The converted pressure is called PD and is given in psi. Image with no alt text. The following properties can be computed: The upstream size of the control valve is given by A and its throat size is given by I. To find the upstream throat area, multiply the throat area of the control valve A. Conversion Factors. The conversion factor for the D/T valve in step 7 is then used to convert the ST/SC (slug/s). .
