Aug 21, 2018 Ms. Starsnap will turn you into the perfect fairy Oct 16, 2014 The world's largest puzzle game social network. 4 million challenges solved every day Oct 20, 2019 The Chronicles of Bloody Barny free downloadQ: Why was I awarded only half of the bounty I had set? I just noticed that I received 50 rep today, and it seems to me that I was only awarded half of the bounty. And I did nothing to achieve it. Was it just a bug in the system? A: Some actions when working with bounties are automatically removed at the end of the grace period.

For example, answering after the grace period ends is removed, even if you have the maximum of 100 rep. The present invention relates generally to an indoor or outdoor electronic ballast or lamp. More particularly, it relates to an electronic ballast for driving fluorescent lamps which can operate at different power levels. Electronic ballasts for driving fluorescent lamps are well-known. One commonly available type of electronic ballast, which is used both indoors and outdoors, is a four-wire type ballast. This ballast can operate in two power levels. In the first power level (e.g., a normal power level), the power provided to the ballast is an AC power voltage that is substantially nominally 120/240

VAC. In the second power level (e.g., a reduced power level), the ballast is supplied power that is nominally 80/120 VAC. This type of ballast is commonly designed to provide a convenient level of dimming of the lamp. By adjusting the duty cycle of the ballast, the intensity of the lamp can be varied. A problem with this type of ballast occurs in that the circuitry thereof is complicated. In

addition, in order to provide dimming capability, the ballast is typically designed to supply a substantially low voltage to the lamp. As a result, a ballast of this type has a large power rating, but a small current rating. Such a ballast is designed to provide less energy per unit time to the lamp than is required for normal operation of the lamp, and is therefore inefficient. Another problem with this type of ballast is that the power levels are fixed, and are not designed to operate at different power levels. As a result, a dimmed ballast can only be used in one of these power levels. Further, 3da54e8ca3
