It provides functions such as boot-up logging, hardware monitoring, fault diagnosis, status monitoring, process tracing and so on. And it can work by connecting to GSM modem via UART port. DiagPane is equipped with multiple graphical interfaces for both technical engineers and end users. For technical engineers, DiagPane uses real time traces and data collected by monitoring system, to diagnose and report faults, and customize incident handler for multiple mobile communication applications. For end users, DiagPane works for both in-use mobile application and early stage application development. In end users cases, DiagPane combines of customized user interface and real time traces to give users all the necessary information. More information about DiagPane can be found at its website: DiagPane Features: - Graphic visual interface for end users - GSM modem communication interface for technical engineers - Real time traces collected by monitoring system - Hardware monitoring and fault diagnosis - Software error reporting - Process tracing - Customized incident handler for different mobile communication application - Alarm system of faults - Easy to report faults and events - DIAGPANE OS: Windows DiagPane, for Java Embedded Systems: Software Diagnostic and Reporting System for Mobile Application DiagPane is a Software Diagnostic and Reporting System for mobile application development.
