vicodicom/flight-simulator-x-highly-compressed-free-download-only- 13mb. There are no tags in this repository. But if necessary, tags can be added. After that, you can edit the code, and the files that are used in the tags will be available to all other developers. And if you need to change something in the code, you can do it by editing the tags. In the repository, I specified the "vicodicom" tag. This is done not only because I love my project and want to continue doing it, but also because it is the most popular. But, in principle, you can use any other tag for your project.
