3 Way Channel Changer License Key [March-2022]

----- This plug-in will allow you to change the transmitting channel of your master keyboard on the fly. To do it, simply choose the channel using the "CC #" knob on the insert panel. That knob (or slider) represent the channel position, so when it is in the "0" position the transmitting channel is the first indicated above, and when in the middle position ("64") is the second, and when in the end position ("127") is the third. If you dont have any VST host, just run the plugin using the VST panel

---

of the host. It will just change the  
CC channel. Version V1.0:

The 3 Way Channel Changer will allow you to change your master keyboard transmitting channel on the fly, without need of extra hardware and cables. 
- Only a CC\_CHANGE message will be send from the parameter knob position to the host to control the channel switching, sending a full MM protocol (it is the easiest method to switch midi channels).
-

---

The plugin is able to handle down to 127 channels! The channels can be up to 127 midi channels. - You have the possibility to set the midi channel to use in the plugin from your host with a custom parameter (it is by default set to " 64" (i.e. second CC# value) - The plugin has different modes of operation: - When the "Toggle CC#" knob is in its last position (CC\_NO\_CHANGE), all the midi channels are the "Default" (channel1, channel2.. n). - When the "Toggle CC#" is in the middle position (64), the action to change the channel will only be switched to the next channel over (72, 73..74,...). - When the "Toggle CC#" is in the initial position (0) the function will change to the channel indicated directly from the

---

value "CC#" parameter (1, 2...).

VST Channel Changer uses an extra module to handle the midi channel change, and there are dedicated parameters to control the operation of the plugin. You can use these parameters to setup a functional switching of channels, or you can use them directly from your vst host by passing a CC message. In that case, the CC message will be set as parameter knob for parameter1, parameter2... You can open the midi channel assignment window from the vst host parameters window, and assign channel numbers to the parameters. Features: MIDI Channels: VST hosts may change the midi channel

---

sending to your midi controller  
midi message (CC MIDI message:  
Channel Change), passing the  
desired parameter knob position.  
The program that will receive the  
message will be the plugin, and the  
choice of the channel to use will be  
determined depending on the value  
of the parameter1, parameter2...  
knob position as
