Category:Technical drawing[Epidemiological study of accidents in three departments of the Pyrenees (1974-1983)]. A retrospective study of accidents in the department of Cantal, in the Gévaudan and in the Dauphiné was carried out. The objectives were to examine the incidence of various accidents (accidents involving the head and neck, fractures and dislocations, and general diseases), to determine the frequency of accidents in each country, to examine the distribution of accidents over time, and to assess the relationship between accidents and age, sex, occupation, and marital status. The data were obtained by tabulating information from the registers of each of the three departments. The same procedures were repeated for a random sample of the population, in

order to compare the results from each group. Accidents are more frequent in the Cantal than in the Gévaudan and in the Dauphiné. There is a peak in the incidence of accidents in the second and third decade. Women are more affected than men. The principal types of accident are transport accidents, work accidents, and sports accidents. The risk of accident is not related to age, sex, occupation, or marital status. Q: is it possible to open a pdf file from byte array I'm using asp.net webapi 2.0. in my project, I use ossimclient to transform the data from google earth, ossimclient returns a byte array. there is a method to convert from byte array to stream, I want to read a pdf file to my controller, it is possible? thanks A: You can read the bytes from the Byte array and write them to the Output stream. var docStream = new MemoryStream(bytes); var response = Request.CreateResponse(HttpStatusCode.OK); response.Content = new ByteArrayContent(docStream.ToArray()); then you can return the response object from your web api 54b84cb42d
