Autodesk AutoCAD's Role in the CAD market? Autodesk AutoCAD is considered as the most popular and the top CAD software application with two-fifths of the market share in 2018, and 2019. CAD stands for Computer-Aided Design, which refers to a software application or service that assists in creating, modifying, and detailing 3D, 2D, or data visualization design models in order to aid the drafting,

---

drafting, and data presentation/reception processes. With today's technological advancements, it is very easy to create and modify the design in CAD. All you need is a good graphics software application like Autodesk AutoCAD. What are the Advantages of AutoCAD? Autodesk AutoCAD offers the following advantages to its users: Very easy to use It is a very intuitive application. It is

---

very easy to learn the application and start using. It provides very easy 2D and 3D modeling and editing. It is fast, and it offers most, if not all, the functions that users may want. The application is very reliable. It is very secure, and it is very accurate, both in 2D and 3D. It comes with an inbuilt drawing and editing workspace that is very user-friendly. Users can get all the features they need through the AutoCAD mobile

---

and web apps. Autodesk AutoCAD can be used in a range of fields, including architecture, civil engineering, and even interior design. It can be used for students and practicing professionals. How AutoCAD Works? Autodesk AutoCAD works as follows: Once you purchase it, the software is installed in your computer. The software enables you to work on different projects as many as you like.

which can be run either as a free application on Windows or as a plug-in to Microsoft's newer Microsoft Office applications. AutoCAD LT is available for download on the Autodesk Exchange Apps or Autodesk Exchange marketplace. AutoCAD LT is the basis for Autodesk technical communication products including Technical Communication Suite. In the 2006 release of Autodesk

Architectural Desktop, Autodesk introduced a software product, Architecture Central, which provides a software application environment that enables users to browse, create, and share architectural models. Architecture Central is integrated with other Autodesk applications such as AutoCAD and is available for Windows, Mac OS X, and Linux. Cross-platform product: AutoCAD LT, released in 2009, offers

---

non-Windows users the same level of functionality as AutoCAD. Web-based version of AutoCAD: starting in version 18.0, Autodesk introduced a web-based version of AutoCAD that is compatible with web browsers, including Chrome, Firefox and Internet Explorer. The web-based version of AutoCAD simplifies access to AutoCAD on any computer, and integrates with other Autodesk products. Civil

AutoCAD Civil 3D supports  
various industry standards  
including Building Information  
Modeling (BIM), which is a set  
of best practices, procedures  
and systems for the efficient  
and effective representation,  
exchange and management of  
information about the three-  
dimensional characteristics of  
buildings and their components,

and for the efficient storage, dissemination and utilization of building information.

AutoCAD Civil 3D also supports ISA 1003 (formerly known as IEC-ISO 10303) as an alternative to other BIM standards. ISO 10303-11 is an international standard that defines a description of BIM workflows for design,

---

via a radio base station, by using a radio access technique standardized by the 3rd Generation Partnership Project (3GPP), the radio base station has assigned a carrier, also referred to as a physical resource block (PRB), to each radio communication terminal. Therefore, at the start of radio communication, the radio access technique enables the radio communication terminal to select a PRB which can be

---

utilized, from among multiple PRBs assigned to the radio base station, as an available PRB. As a result, the radio communication terminal can connect to the radio base station at an optimal transmission rate, and then conduct communication. Recently, a technique for providing a communication service for a large number of users by using a shared communication channel of a radio

---

communication network has been proposed (see, for example, Patent Literature 1). In this technique, a radio communication system for efficiently utilizing a communication band available in a radio communication network is configured. In the radio communication system, a plurality of radio communication terminals share a communication channel assigned to the radio

---

communication terminal. The radio communication terminal is able to utilize the assigned communication channel in a radio communication device having an antenna. In this manner, a large number of radio communication terminals can communicate with a radio base station with the shared communication channel. In a radio communication network having a shared communication channel, a communication

---

resource is shared among a large number of users, and therefore the communication band available in the radio communication network is shared among the large number of users. Accordingly, in a radio communication system using a shared communication channel, as described in Patent Literature 1, it is difficult to assign a communication channel to each radio communication terminal. In this
