When AutoCAD is first opened, users are presented with a blank drawing window, which is the default drawing created when a new drawing is opened. There is no default line or path type, so the first step is to create a line or path. Lines and paths are specified by the movement of a pen, stylus, or mouse. All lines and paths begin as straight lines, but can be modified to a curve, arc, spline, or bezier curve to generate more complex forms. AutoCAD users can add dimensions, draw guides, snap to scale or other reference points, create symbols, callouts, and create annotations. There are numerous other features. Note: This article is only about AutoCAD for Windows. If you don't own a copy of AutoCAD yet, you can download and try the free version of AutoCAD 2019 or you can purchase a full version of the software from the Autodesk website. What is AutoCAD? CAD stands for computer-aided design, and AutoCAD is the world's leading commercial desktop CAD (or 2D CAD) program. AutoCAD is a powerful, feature-rich 2D CAD/drafting software for creating 2D architectural and engineering drawings, including blueprint-style drawings, electrical drawings, mechanical drawings, and other 2D representations of 3D objects. If you are creating a 3D model, you need to download and install a 3D CAD/CAE (computer-aided engineering) application, such as Creo or SolidWorks. When you open AutoCAD, you create a new drawing, as shown in the following figure. In the beginning of the drawing, the line is set to line style 2, which has no special features. In this section, you will learn about the line tool. When you draw a line, it creates a closed line. There are many different line styles and line types. See the section below for a complete list. Setting Line Styles and Options When you open AutoCAD, the only active tool is the line tool. The line tool is used to create lines and lines and arrows. By default, the line tool is set to line style 2. Line style 2 is a straight line. You can change the line style to create a curved line by holding down the Shift key when drawing a line. To change the line style, click Line Style in the home

Open the registry editor, press the following keys: HKEY_LOCAL_MACHINE\SOFTWARE\Autodesk\AutoCAD\14.0\ You will find "ACADKEY" as a DWORD value, set it to "1" to override the key manager. Double-click the DWORD, and you will get the key to use. If you are already using a key the above method won't work. In that case, you can make use of Autodesk AssetGuid. For more information, see Appendix A. Appendix A: How to use AssetGuid In order to use AssetGuid, you need a license to the key. The license key is generated from the "license.exe" from Autodesk Autocad. You can find the license.exe in the path: C:\Program Files\Autodesk\Autocad\14.0\acad. You must have that license.exe file with the extension. When you open the key, it will ask for a license. Use the license.exe from the command line. If you didn't find the license.exe, you can download it from the Autodesk website at the following link: You can find more information about the installation in the link above. Create a new folder named "Key" in the "Program Files" folder. Open the "license.exe" in the new folder you created In the command line, use the following command to run the license.exe. "C:\Program Files\Autodesk\Autocad\14.0\acad.exe" -reg /path /keypath /regtype /keyfilekey /filekeyfile I recommend using the "a.key" and "b.key" files as keys for Autocad, because they are working and can be used on multiple machines.
