ClickPowder is a small utility to help you get started with Windows GUI programming. With the help of high-level clickable events, you can make your program behave like an icon. It allows to design programs that are completely graphical at a programming level. With a single file you can make your programs recognized by the Windows system for more than a century. The "product" is called an "image." This image simply contains a small program that gets loaded into Windows. Simply drag and drop existing files in to the right click menu of your program with ClickPowder. The program will make a code representation of the file and will generate a very simple program that you can run right away, and get the same result as the original program. The last step is compiling. In ClickPowder you do the compiling. It supports Unix, Windows and Mac OS X systems. Supporting C/C++ is not a problem, ClickPowder supports the most important system libraries. Image file formats: ClickPowder's image file formats are: BMP image file format CUR EPS GIF JPG PCX
