- functions and data may be plotted in nearly all directions - *Auto* and *Toggle* plotters include a complete tool box - additional formats are available: SVG (Scalable Vector Graphics), EPS (Encapsulated PostScript), PDF (Portable Document Format), PNG (Portable Network Graphics) and GIF (Graphics Interchange Format) - *axis*, *log-scale*, *abs-log-scale* and *vertical* log plots are available - *mouse-scrolling* feature for pseudo-3D plots - plots may be annotated with text labels and line styles - the plots can be exported to PDF, PNG, EPS, PDF, SVG, JPEG and others formats. - independent mouse cursor for zoom/pan/rotate functions - built-in VBA editor for Microsoft Excel® or VBScript
GraphicMaster Crack Free Download features: * *nested* functions: plot a function $f(f(x),y)$, where x is always 0 * *extensible* plots: plot a function in the shape of an animal, i.e. plot a function in the shape of a fish, with the tail moving to the right * *auto* plots: plot a function by pressing a hot key combination (Ctrl+Shift+...) or automatically every time the plotter window is opened * *window-location-indicator* shows the location of the mouse cursor in the plot window, allowing for direct pointing to the desired function location * *toggle* plots: plot a function by pressing the right mouse button * *grid* or *graphite* plots: generate plots that use the power of graphs to guide the eye * *unit* plots: plot function values in the correct units * *mouse-scrolling* for pseudo-3D plots * *axis* + *log-scale* for arbitrary function axes: plot logarithmic scales (for example, for power functions) on both axes * *abs-log-scale* for a range of functions that the user decides: plot a curve from 10 to 2, for example, with its x-axis scaled logarithmically * *vertical* log plots: plot a function $y=f(x)=a*x^b$, with the x-axis scaled logarithmically * *overlaid* plots: plot a function and its derivative simultaneously * *segment* plots

GraphicMaster Free (2022)

Make the easiest part of your job easy. With the code editor you can create code macros. Macros allow you to press one key in your keyboard to generate a text. GraphicMaster Crack Free Download supports two types of code macros. Either macros, which allow you to run a function, and macro definitions, which allows you to define a list of functions. How to use it: Simply highlight the function that you would like to use in a plot and click on the icon marked "create macro." The function gets highlighted. Click on the icon "save as" and save the code macro. This way you can now edit this code macro. On the right hand side you will see the list of macros. Features: Supports nested functions. It is not possible to nest a function that defines a function. Recursive functions are supported. This means that you can write a function that calls another function. Supports a very wide range of mathematical functions: Exponential, Logarithmic, Algebraic, Trigonometric, Hyperbolic and Cosine functions Supports a lot of scientific data types, like numpy arrays and Pandas Series For each function, you can set the start and the end values as well as the number of decimal places Macro definitions can be saved, or shared with other programs It is easy to export the data as an image (JPG, PDF and PNG) Basic palette is available and supports over 40 color options Export to html, png, pdf and xls files Supports Windows 10 and Mac OSX (El Capitan is required) Excel files can be exported as well Some useful tips on the application: • Double clicking on the function list, or the function editor in the main window opens the function. • The y-axis of the Plot functions is inverted, so the maximum values are at the top. • There is a short delay between pressing the Function list and the function getting plotted. This is due to the fact that the function needs to be rendered. • You can save your plot in different formats, such as JPG, PNG, PDF and even HTML. • If you have a graphics card, you can choose to cache the plots so that they are not being refreshed • If you change the window resolution you will see a black screen for a few seconds • It is possible to use the function editor for more functions • In the main window 1d6a3396d6
