Q: What for real world use are muon detectors? Similar to electron detectors, muon detectors can be used to detect the passage of muons through matter. There are several engineering applications, one of which is the neutron activation analysis which uses naturally occurring radioactive isotopes as tracers. My understanding is that muons are so rare that there are rarely actual situations where a muon would be the first indication of something like a nuclear reactor. However, I might be wrong. What makes them so rare and what are the practical applications for them? A: The application you mentioned, neutron activation analysis, is one of the best known applications of muon detectors, and there are a number of other applications. Without going into too much detail, muons are neutrinos with a mass of (approximately) 104 times that of an electron. They are produced in nuclear processes and with high-energy neutrons they are an almost pure sample of the many neutrinos that can exist. Muons can be produced from the decay of pions, which in turn are produced by cosmic ray interactions in the atmosphere. If, for example, someone who works in nuclear research wants to locate and measure the presence of a uranium pile, they would set up a shielding of the most likely path of muons, place a detector at the entrance and a detector at the exit. They would then wait for muons to pass through, measure

I don't need that kind of thing. Kirk and Spock and McCoy and Kirk and Spock and..... Spock! (Grow up, you, McCoy) I mean, just think about the dumb things you saw in that show. It had some really dumb situations, and some stupid things, and some really dumb lines. I mean, Spock has a line in there where he's saying "I need to walk among my people," and he's standing there, looking at the Enterprise. He's thinking this, "I wonder what they think of me?" So I was watching it and I was like, "This is the dumbest thing!" And then it was over. So I was sitting there, thinking, "Doesn't anybody care about Kirk anymore?" Does anybody really care what Kirk thinks? And what's with George Takei and all his crap. I don't know, I don't like it. Then I start thinking, "I don't even know who this Spock is any more," and I was like, "What happened to Spock? What happened to him?"
