A: Code Highlight is a code editor for Windows and Linux that includes: keyboard shortcuts, bundles of languages and their syntax highlighting, C, C++, Java, JavaScript, C#, PHP, Perl, Ruby, Python, Go, HTML, SQL, PostgreSQL, HTML, XML, PDF, LaTeX, etc. language syntax highlighting, automated refactoring, indentation controls, quick links to snippets in the left tool bar and search box, code templates (capture, display, and further templates), syntax colors in the editor, 'magic' snippets (tooltip, show in editor when typed, etc.), autosave and restore, projects, groups and snippets, multiple file highlighting, commands, bookmarklets, etc. Bar-Lev: "You'll say: 'I'm a two-year-old kid, and I live in New York City.'" But parents of two children who have died by suicide in New York City in the past year could testify to the surprising truth of this quote. They were not just any two-year-old kids; they were African-American or Latino boys who lived in Brooklyn or the Bronx. According to a report in the New York Post, the Department of Health and Mental Hygiene logged only three new pediatric deaths in New York City in 2014—one child was a 4-year-old girl who suffered a head injury in a fall, another was a 5-year-old boy who died of a bacterial infection, and the third was a 7-year-old girl who had cerebral palsy and epilepsy and who "bled out" of her home. Bar-Lev is the author of Tell It Like It Is, a book that takes readers inside the lives of families and communities affected by gun violence. To hear him talk about the high rates of gun-related death among young black and Latino boys, it's impossible not to think of American urban life as a war zone. A lot of people, he says, are asking "Why don't you call this what it is?" He goes on: "When a two-year-old black boy or Latino boy is shot, it's not a heart attack. We call it an 'infant death' or ◆

Tinn-R is an editor and code comprehension tool for R that lets you code in a compact way and without sacrificing much functionality. Tinn-R has great capabilities to offer R code formatting, syntax highlighting, and broader resources like integrated IDE, easy-to-navigate GUI, multiple Unicode encodings support, and much more. A code editor that's suitable for R and many other languages As expected, different tools target different niche programmers. Also, there are more generic and instruments that address different user needs. Although this application's name (Tinn-R) makes it pretty difficult to believe it could be useful for other than R programming, the tool does have enough features and options to allow cross-language usage, as well as fully support other technical needs (e.g. like writing documentation). For example, this application offers Latex support, suitable for writing extensive and complex documentation involving mathematical equations and chemical symbols. Also, Tinn-R has useful tools for users who want to create and organize their work in a more consistent manner. The app has project management features, allows you to simultaneously work on more projects, and enables you to group, collapse, or extend same-content chunks. Also, in a separate dedicated window, you can enable

and analyze differences in multiple files; as such, via color code highlighting, you check two files' differences and similarities. Multi-syntax support, R templates, and demos There is crucial to have intuitive applications with well-built menus and easy-to-follow routines and workflows. However, there is even more important to always have a lot of samples and demo data available, for users to understand exactly how is best to use the app and for them to see the true potential of all the instruments. Tinn-R supports a ton of well-known language syntaxes, among which C-like ones, Python, PHP, Perl, Java, R doc, R markdown, SQL, Batch MS-DOS, etc. Plus, the app has a bunch of R templates, like R script, R doc, R HTML, R markdown, or R noweb. To conclude, the app is a solid code editor that offers code highlighting, autocompletion, and, more commonly, R-oriented templates and samples. Tinn-R's features • Save as File format: HTML, LaTeX, R Markdown • Save as Text format: C/C++, Java, JavaScript, PHP, Python, R • Save as R Script format: R, R Markdown, R Doc, R HTML, R Noweb • Save as R Console format: R CMD BATCH • Save as HTML: HTML, Markdown, R Markdown, Tiddlywiki • Save as PDF format: all files
