Isometric features such as orthographic and topographic views, an inset and a bubble on the command line as well as being able to use this to calculate isometric views from orthographic and parallel views. Interactive guides (also known as implicit planes) are non-parametric objects that can be placed on any drawing surface and give it an implicit surface. They are based on the implicit plane command and are implicit planes with adjustable elevation (z axis) and surface normal (x axis). The color of the plane is the same as the surface color (the surface color of the active layer is defaulted to black, but can be changed at any time) Trig points, linked points, splines, spline segments and surface lists allow a computer-generated editable polygon-like tool that can create mathematical formulas and scripts. Trig points, linked points, splines, spline segments and surface lists allow a computer-generated editable polygon-like tool that can create mathematical formulas and scripts. This is supported in AutoCAD 2010 and later. These tools were introduced in Autodesk Design Review 6. AutoCAD LT scripting language is not compatible with AutoCAD, although there are ways to mix or 'merge' LT scripting with AutoCAD scripts. AutoCAD's .NET framework provides functionality such as component applications and scriptable drawing tools that allow it to run on a variety of platforms. AutoCAD also supports Visual LISP programming, which allows users to write programs within the running AutoCAD software. AutoCAD includes the ObjectARX library. Visual LISP is then used to interact with the objects of the drawing or to automate the drawings themselves. Programmer's interface The programming interface for AutoCAD LT has two components: The user interface (UI) is the programming language that the programmer uses to create the commands. It is based on a platform-independent, object-oriented programming language called ObjectARX, which is designed specifically for the construction of user interfaces. The language itself is a combination of the ObjectARX language and the AutoLISP programming language. As noted in the Autodesk Home page, "AutoCAD LT uses the ObjectARX Interface Builder and AutoLISP Compiler to create the user interface. ObjectARX is an Object Oriented Programming language used to build applications. AutoLISP is an interpreted dynamic 5b5f913d15
