I have found my brackets and they have worked great so far! I have a question in regards to the brackets for the solar panels on my go pro camera that clip on to the window mount on the side of your camera. They are huge and heavy. I am looking for a way to reduce the amount of weight they have to carry on my camera. I was thinking I would go ahead and tape them down to the side of the camera on the inside of the camera and then lift the panels up on the brackets to flip them up. I have already noticed the panel does not sit all the way to the window mount bracket because of the weight of the panel. Is this a way I could compromise and hopefully find a way to reduce the weight of the solar panels and still be able to use the window mount that comes with the camera? Thank you. -Shayla Hello!
