MySafePass Editor creates the master passwords for you automatically, so you don't have to enter them. If you ever lose your password or forget one of your details, just email MySafePass to us and we will return it to you. All of your information is encrypted and saved in your MySafePass Editor document. The encrypted document is openable by all your desktop system and Web browsers, but only MySafePass Editor is aware of the encryption keys and can decrypt it. If you use more than one Web browser, you can have a separate password for each browser, so the passwords stay safe. MySafePass Editor password, key phrase or list of text passwords, can be saved on your hard disk or in a USB flash memory stick. If you lose or forget your password, you will be able to recover your information, because MySafePass Editor allows you to keep a record of all your users and passwords. You should be careful to avoid using the same password for more than one account, as hackers could then log into all your accounts at once. Why have I made a Safe Password Manager: Hackers can get information about your passwords, credit cards and banking details by hacking into your computer or using your computer without you knowing. They can also use your passwords to access your personal information from your computer. This is the biggest danger from unsafe computer use and is why many users of the Internet download programs from the Web. Most of these programs, which are called viruses, can install spyware on your computer which gathers information from your computer and then sends it on to others. Spyware steals your personal and financial information including credit card numbers and passwords. It also installs programs on your computer which enables hackers to look at all your files and see your personal information. Spyware is not limited to the Internet, it can also be found in your downloads folder on your hard drive. Spyware programs, especially viruses, can keep running on your computer after you have installed them. The costs of buying a new computer is very high for many people. Many virus programs can be removed with the help of a computer virus cleaner, but this can be a difficult process if you do not understand how to remove them. MySafePass makes saving your passwords an easy and secure process. MySafePass has no spyware and no spyware. MySafePass is compatible with all popular computer operating systems. MySafePass is free to use and install.
