Players can use "Trainers" to analyse footage, as well as options within the game such as optimising player attributes to tweak game performance. This helps players create more tactical and game-changing approaches to challenges. Further optimization features added to FIFA 22 include reactive AI, more skill moves, enhanced physical attributes and new "intelligent" tackles. "For years, we have taken the important aspects from a match, each delivering the best visuals on PlayStation 4 to accurately recreate the action from around the world," said Daniel Ringland, Head of Franchise and Ultimate Team at EA Sports. "With FIFA 22, we have taken it a step further and used a real-life football match from around the world to bring this universe to life. To do this, we needed to develop new techniques using motion capture technology. The way it works is by analyzing all of the data from our 22 test subjects playing a full 90-minute match. It's important to keep in mind that the game we've created is not a recreation of a match, but it is a recreation of the intense, tactical battles that take place within a real match." The actual data-capturing process was both complex and incredibly detailed. Here's a little more on how it works. The Body Motion capture technology was invented in the 1930s by American inventor James Eckels and his co-workers at the University of Southern California. Soon, the "blimp," as it was called, was used in television games. For the first time in a video game, the blimp could accurately replicate a human body for use in fictional cartoons and on-screen action. During the 1980s, actors would move in front of a blimp, which would measure their position in three-dimensional space. In the 1990s, the data were combined with CGI to create moving, three-dimensional computer images. Today, the technology has advanced tremendously, with methods of measurement becoming more and more accurate. With the introduction of the PlayStation Camera, EA Sports was able to use body-tracking technology. With its first big moment in FIFA 14, Sony's new controller gave gamers with PlayStation 3 a means of doing just that. Body tracking gave life to the FUT series (FIFA Ultimate Team), creating a whole new set of challenges for the development team. "Working with the development team, we discovered some amazing capabilities, allowing us to create this first-
