9. Review your image in Photoshop and turn off any adjustment layers, if you have any, to begin editing. 10. Open a new layer for your image and call it "Background." Select it. Choose the Eraser tool and a size of about 50 pixels. With the layer selected, press the Ctrl (Windows) or Command (Mac) key, and paint over the image with the Eraser tool. If you click in the middle of a selection (such as the light), the tool will un-select any pixels. If you click outside the selection, the tool will deselect any pixels. 11. Use the Eraser tool to paint over the left and right edges of the waterfall. 12. Continue to add layers by creating a New Layer (Ctrl/Command-N) on the right side of the waterfall and a New Layer (Ctrl/Command-N) on the left side of the waterfall. Be sure to paint the layers slightly darker than the rest of the image. Create a new layer by pressing Ctrl/Command-N, then select the Paint Bucket tool and pick up the black color in the Select menu. You can also use a color picker tool that allows you to select from a color palette. Press and hold the Shift key and click on any black area in the image; you will see a reference color that you can paint on top of the black. Paint over the top of the water and the rocks, eventually creating water and sky on your image. 13. Continue to add the other colors to the image, using similar methods, or you may select the other colors in the swatches at the bottom of the dialog box. Use the Color Selector tool to select other colors. 14. The image is the result you're looking for in the end! You can resize the file by choosing Image > Image Size. Experiment with resizing the file to emphasize the foreground subject. # CHAPTER 6 # Light and Gamma USING THE LIGHT AND GAMMA An important aspect to look at in this chapter is the Light and Gamma Color Control (Figures 6-1 and 6-2). These two adjustments affect all the colors in the image you are editing. \*\*Figure 6-1\*\* The Light and Gamma Color Control. \*\*Figure 6-2\*\* The Light and Gamma color controls. Q: Is  $\sum_{i=1}^n \frac{a_i}{a_{i+1}} \frac{x^i}{i!}$  a polynomial in  $x$ ? I have a problem. Is  $\sum_{i=1}^n \frac{a_i}{a_{i+1}} \frac{x^i}{i!}$  a polynomial in  $x$ ? I'm quite sure that it is, but don't know how to prove it. What should I use? Thank you. A: Yes, it is a polynomial. If  $a_n$  is even, then  $\frac{a_n}{a_{n+1}} \frac{x^n}{n!} = \frac{1}{2} \sum_{i=1}^{n-1} \frac{a_i}{a_{i+1}} \frac{x^i}{i!} = \frac{1}{2n!} \sum_{i=1}^{n-1} \frac{a_i}{a_{i+1}} (x-1)^i (x+1)^{n-i-1}$  Now use the Jacobi triple product, and then the binomial theorem. /\* \* Copyright (c) 2018 THL A29 Limited, a Tencent company. ### What's New in the?

The present invention relates to a machine and method for wrapping portions of a rotary cutting assembly such as a blade with plastic film material in the form of a tube. Specifically, a portion of the blade and at least some portions of the cutting means supporting the portion of the blade are all received within a tube when a portion of the blade is received within the tube. The portion of the blade is secured by an adhesive extending across the area of the blade and the area of the blade is pre-treated. Many rotary cutting assemblies including cutting blades, cutting tools, cutting discs and the like are received within a tubular member and the blade is supported within the tubular member such that the cutting blade is effectively raised from a cutting area of the blade due to deflection of the cutting blade during operation. See, for example, the present assignee's U.S. Pat. No. 5,836,235. The tubular member with the rotary cutting assembly received therein may also include cooling means. In some rotary cutting assemblies, the cutting blade is mounted upon a swash plate. Certain currently known rotary cutting assemblies require several steps including application of a liquid lubricant, cutting of the blade material, application of a sealant, and application of a lubricant to key areas. Due to the number of steps required to assemble the rotary cutting assembly, the current steps are time consuming and expensive. Accordingly, there is a need for a machine and method for applying a tube around a portion of a rotary cutting assembly with a minimum number of steps and a minimum number of machines to perform the method. The present invention relates to a method for wrapping a portion of a rotary cutting assembly with a tube material. A portion of the rotary cutting assembly is placed within a wrapping tube to form a complete rotary cutting assembly with a tube. The portion of the rotary cutting assembly is received within the tube without a filler. The portion of the rotary cutting assembly is secured by an adhesive and is held securely within the tube. The portion of the rotary cutting assembly is pre-treated and coated with a lubricant. The portion of the rotary cutting assembly is cut to a desired length and is fixed in the wrapping tube. The portion of the rotary cutting assembly is cut out of the tube and the wrapping tube is removed to create a wrapped rotary cutting assembly. The wrapped rotary cutting assembly may then be placed in a rotary cutting assembly assembly and attached to a
