Voltage-gated sodium channels are important regulators of action potential conduction in all excitable cells. Recent structural analyses of eukaryotic and prokaryotic sodium channels have now provided information on the channel pore region and its architecture, the structure of the voltage-sensing domain, and the conduction pore region and its composition. The sequential assembly of these structural elements leads to the voltage-dependent activation of the ion conduction pathway. The channel inactivation gate, or inactivation particle, is positioned within the pore and appears to interact with the C-terminal domain of the voltage-sensing domain. This interaction is modulated by a sodium ion within the gating pore, and when bound to the inactivation particle the ion conducts without blocking the channel. Inactivation of the channel is highly cooperative. Finally, the implications of recent data for the roles of sodium channels in the regulation of excitability in excitable tissues are discussed.

the West () is a Hungarian documentary produced by Péter Forgács and directed by György Pálfi. It has been presented at the 2003 Venice Film Festival. It was released theatrically in Hungary in 2006 and became a critical and commercial success. It is an overview of the fall of the West that the filmmaker argues is overstated. It states that the fall of the West began in the 1960s. Pálfi also places the fall of the West at a later stage in European history and asserts that the golden age of the West can be traced to the Middle Ages. The film claims that the decline of the West

navigation Occasionally, you might find yourself  
at the zoo, and there might be a surprising  
exhibit on display. I was in the zoo with my kids  
recently, and while we were walking around, we  
came across a young, well-fed male polar bear. I  
didn't expect to be that close to a live polar  
bear that just happened to be eating a raw  
bagel. I was impressed by the amount of hair on  
his face, and the way his orange mane  
contrasted with his white fur. But then he tilted  
his head back and grabbed the bagel with his  
massive paws. It was simply magic to see. What  
a friend we have in Jesus, all our sins and griefs  
to bear, what a privilege to carry everything to

God. What a glorious privilege to bear his Son.  
\*by Lewis B. Smedes Another place you will frequently see polar bears is at nearby Sea World Orlando. Polar bears are found in the Arctic Circle, but they also live in the coastal waters of the United States and Canada. They are one of the most dangerous animals to humans because of their powerful jaws, rowdy disposition, and formidable claws. Back in 2006, Sea World's polar bear and walrus act was disbanded because of an outbreak of fatal mange. The show opened with the two polar bears walking quietly through their enclosure at the front of the stage. Soon, the titular walrus became visible. The long, hairy creature was barely recognizable as a walrus and was instead wearing a Russian sailor's hat. It wandered up the ramp and began to do its walrus dance. Then it grabbed a flag pole. The walrus was carried from behind the audience and placed up on the stage. The
