Adobe's postscript file format remains in use today as a term for the proprietary flat image format created for use in the Adobe suite. The term 'PSD' is commonly used to refer to this format. For more info about this term see our article 'Adobe Photoshop file extension '. The History of Photoshop The Photoshop file format was originally created by Fabrice Delogenes, a French computer scientist, and Michal Kapeliouk, a Polish film director, in 1989. The format was sold to Adobe Corporation to develop a software product that would enable users to create and edit photorealistic images. Photoshop was released as an 88-page manual that Adobe sent to potential buyers. It has since become popular for training programs on how to use the program. Adobe still produces the 88-page manual with additional features that have been added since its release in 1989, and even publishes it as a PDF download on their website today. In August 2002, Photoshop was translated from longhand into computer language. A team of software developers translated it from a series of handwritten pages to the equivalent of a modern computer document. Photoshop is famous for being one of the first image editing software to be used for manipulating digital photographs. It's still one of the most widely used such software. The logo of Photoshop originally had the words, "the world's leading image manipulation software." In the early 1990s, the company was not selling many Photoshop licenses. When Adobe changed its strategy to focus the program's development to create a "smart" graphics tool, Photoshop moved from what was known as a "graphics editing" software to a complete imaging program used for photography editing, as well as its base, ADOBE EDIT. The term "photoshop" came from an excerpt from the early 1990s edition, released in December 1997: "If you have never worked with Photoshop, you may not be familiar with the term. But you may have seen the term used in press releases to describe the latest program by Adobe Corporation. That's because the term often winds up in our press releases, touting the latest features of the program." With the release of Photoshop 6, the company introduced a reorganized interface and changed its branding, dropping the "graphics editing" aspect of the name, and the mid-90's features were phased out and removed in order to focus on Photoshop's more consumer-oriented image editing capabilities.

Q: Merge master branch with head of origin/master branch I would like to merge the master branch with the head of origin/master. Is it possible to do this without having to manually delete my local master branch and creating a new one? A: It's pretty simple with git: git fetch origin git checkout master git merge origin/master A: You can also use git merge-base in this situation. $ git rev-list master..origin/master This gives you the SHA1 of the common ancestor of your master and origin/master. A: git branch -f origin/master Q: What is the difference between these two conditional loops? What is the difference between: 1. while (list_count > 0) { /* do something */ list_count --; } 2. while (list_count > 0) { if (condition) { /* do something */ } else { /* do something else */ } list_count --; } A: Two things I think that you can use in each example: The loop counter / iterator variable you're using The condition for the loop In the first example, you have a straightforward loop. In the second, you've built a "conditional loop". For example, you might write: { x = 10; while (x > 0) { printf("x = %d ", x); x--; } } versus: { x = 10; while (x > 0) { if (x > 0) printf("x = %d ", x); x--; } } Both of those can be rewritten to use the more conventional: while (x > 0) { printf("x = %d ", x);

Q: If B is a 2×2 matrix, prove that $B^3 = B^2$ If B is a 2×2 matrix, prove that $B^3 = B^2$. It is fairly easy to verify this. Here's what I know how to do. $(B^2)^2 = B^2 B^2$ $ B^2 B^2 = B^2$ B^2 commutes with itself. B^2 is diagonal (if it's two times a 2×2 matrix, B is definitely diagonal). B^2 is hermitian. B^2 is real. B^2 is symmetric. Now, somehow, the matrix B^2 should magically appear diagonally. It's probably somehow related to the fact that it's diagonal (or at least regular), so I suspect that I'm missing some special property of B that I can use. So, what is this property? Thanks in advance. A: I would start the proof off like this: $$B^3 = B^2\implies\begin{bmatrix}b_{11}& b_{12}\\b_{21} & b_{22}\end{bmatrix}\begin{bmatrix}b_{11} & b_{21}\\b_{12} & b_{22}\end{bmatrix} = \begin{bmatrix}b_{11} & b_{12}\\b_{21} & b_{22}\end{bmatrix}$$ Note that since this is a 2×2 matrix, $b_{12} = b_{21}$. Also, since B is invertible, we have that $b_{11}b_{22} - b_{21}^2 = 1$. Rearranging to get: $$\begin{bmatrix}b_{11} & b_{12}\\b_{21} & b_{22}\end{bmatrix}\begin{bmatrix}b_{11} & -b_{12}\\ -b_{21} & b_{22}\end{bmatrix} = \begin{bmat
