Note For an even greater variety of tools, look for the _Photoshop CS6 Toolbox_ book, which is available from the publisher. It uses the same information, but applies the material to Photoshop CS6. Once you open Photoshop, the first thing you need to do is set your work area. Photoshop gives you lots of options for setting up your workspace. Look at Figure 1-4 to see your options. Click on the Workspace Setup button for a walk-through of the choices. Figure 1-4: With the help of the workspace setup options, you can easily create and edit layers, select parts of images, and view the areas where you can crop and resize images. ## The Photoshop Workflow Photoshop has the ability to work in a variety of ways, depending on what effect you want to create. You can create and manipulate an image with single layers, multitasking, and even starting with a canvas before building up a design. ## Layers With a tool called the Layers panel (see Figure 1-5), you can achieve different effects that result in different looks for the image. Use the Layers panel to manipulate an image in a multitude of ways, such as moving and moving groups of images on top of one another. You can also lay down transparent and opaque images on top of each other to create a composite image. You can even use the same canvas (or stack of individual canvas layers) for different types of layers — background layers, layer masks, and more. Figure 1-5: Layers enable you to easily apply different layers of effects in the same file. Because Layers is a special editing system, you need to understand how it works and what it means to the image you're working on. To create and manipulate layers, you work with the Layers panel, but at some point, you may need to open a different window to work with that image. # Chapter 2: Taking It All In The first and most important step in preparing your image

Harrington, who has never coached a single game at the NCAA level, will take over for the fired Dan Enos. "I know that we have a great head coaching staff that will pick up the slack," Simpson said. "I don't think we'll be outworked. It'll be a great day for Bowling Green football." Simpson admitted that the signing was not a big surprise, calling the move "a no-brainer." "I think he does a great job," Simpson said. "Like I said, Bowling Green is a place that's in need of direction. They need to have a direction." His stops in the college ranks include four years at Iowa State, three seasons as the defensive coordinator at LSU and two as a defensive line coach at Bowling Green. Harrington has yet to coach a game at the FBS level, and has yet to take charge of an NCAA team. However, the Appalachian State (2011) and Southern Miss (2014) coaches have been favorites to land the Tigers' job this offseason, and believed the job would be in the hands of a MAC assistant before long. Harrington now gets to take the next step in his career. "I think it's been a big change for all of us," Harrington said. "Coaching at the FBS level is something you dream about. So it's nice to get the opportunity to work in that environment, and to work with a first-class staff. I look forward to it." Harrington still has to interview for the position, and said he is "glad" the job is finally his. "For me to be a part of this institution at the college football level, it's an incredible opportunity," Harrington said. "Just to be a part of the greatest conference in all of the nation, the Mountain West, a place that a lot of our fans are from, it's an incredible opportunity."Diagnosis of inflammatory bowel disease in children with symptom overlap.
